

AUNG KO KO OO

Kobe, Hyogo, Japan · AungKoKoOo@my.uopeople.edu · github.com/AungKoKoOo

RESEARCH AREAS

Artificial Intelligence, Machine Learning, Natural Language Processing (NLP) for Low-Resource Languages, Computer Vision, Robotics, and Human-Robot Interaction (HRI).

EDUCATION

Massachusetts Institute of Technology (MIT)—Online(MITx)
MicroMasters® Program in Statistics and Data Science

Cambridge, MA, USA
Jan 2026 – Present

University of the People
Bachelor of Science, Computer Science
· *Academic Performance:* Cumulative GPA 3.8 / 4.0

Pasadena, CA, USA
Graduated Dec 2025

PUBLICATIONS

[1] **Aung Ko Ko Oo**. 2026. Integrating Natural Language Processing with Deep Knowledge Tracing in Intelligent Tutoring Systems for Low-Resource Languages: A Case Study on Burmese STEM Curricula. Preprint. DOI: <https://doi.org/10.21203/rs.3.rs-9991485/v1>

- Developed an algorithmic pipeline pairing Deep Knowledge Tracing (DKT) frameworks with syntax analyzers to optimize adaptive technical learning structures for the Burmese language.

[2] **Aung Ko Ko Oo**. 2026. Mitigating Hallucinations in Large Language Models for Burmese Domain-Specific Question Answering. Preprint. DOI: <https://doi.org/10.21203/rs.3.rs-10023313/v1>

- Designed a domain-specific Retrieval-Augmented Generation (RAG) fine-tuning pipeline engineered to bound factual anomalies within generative models handling complex, low-resource string dynamics.

RESEARCH EXPERIENCE

Burmese Artificial Intelligence Research Institute
Founder & Lead Researcher

Japan / Remote
Mar 2026 – Present

- Launched an open-source research collective establishing data parsing tools and transformer fine-tuning benchmarks for low-resource character architectures.
- Orchestrated computational resources for localized text classification and customized sequence-to-sequence engineering.

PROJECTS

Intelligent Tutoring System (ITS) NLP Engine
Lead Developer

Apr 2026 – Present

- Built and deployed deep learning text processing pipelines using Python and PyTorch to evaluate student domain-specific inputs in low-resource environments.
- Integrated custom tokenization frameworks with Scikit-learn classification models to map continuous student response logs for real-time proficiency tracking.

Low-Resource Language Vision & Sequence Benchmarks
Independent Creator

- Implemented NumPy-optimized computer vision pipelines and sequence-to-sequence engineering architectures to handle irregular character layouts and linguistic segmentation.
- Developed standalone tools for robust dataset ingestion and specialized downstream evaluation blocks.

TECHNICAL SKILLS

- **Computing Languages:** Python, C++, SQL, Bash, LaTeX, HTML/CSS.
- **Frameworks & Systems:** PyTorch, TensorFlow, NumPy, Scikit-learn, Hugging Face, OpenCV, ROS.

- **Core Methodology:** Retrieval-Augmented Generation (RAG), Deep Knowledge Tracing (DKT), Neural Language Modeling, Sequence Engineering.
